Special Day Shoe Dyeing - Disclaimer

*All dyeing is undertaken at customers own risk.
Please read this leaflet carefully and sign below.*

To get the best colour match, you must supply us with white or ivory satin or silk items to be dyed.

While we take the greatest care when mixing our dyes to match your chosen colour, the fact remains that it is almost impossible to achieve a 100% colour match due to the vast range and quality of materials used in the making of shoes and bags.

Light is also extremely important when matching colours. For example the same colour will look different in sunlight than it will under electric light. At "Special Day", we can ensure that when custom dyeing your shoes and/or bag, they will be dyed to blend as close as possible to match your chosen colour.

Any damages that are already present on your shoes or bags, such as scratch marks, glue stains or general stains may still show through after dyeing.

Shoes, which have been sprayed with protector spray, cannot be re-dyed.

Silk Dupion is a natural fabric, and as such, contains minor variations and irregularities that are characteristics of this yarn.

The results of dyeing this fabric may vary.

I confirm having read the information above, and accept that dyeing is undertaken at my own risk.
